CONTENTS

AT THE SHIPBUILDING YARDS

«Progress» – movement forward!

Launching ship «Admiral Makarov»

Design of nuclear-powered icebreaker «Leader»

NAVAL SHIPBUILDING

***Zamukov V. V., Nekrylova Yu. S.* Structure of nuclear power plant control system at nuclear powered submarine as part of complex control system for submarine's technical equipment**

This article analyzes structure of nuclear power plant control system at nuclear powered submarine, its advancement options and status as part of complex control system for submarine's technical equipment.

***Katanovich A. A.* Prospects for creation of automated lamp communication system onboard the ship**

The author hereby proposes to create advanced lamp communication system onboard the ship to provide high-speed optical communication between surface ships and onshore facilities.

***Sagaidakov F. R., Chernetsova N. A., Guryanov S. K.* Foreign Navies. Current state and development prospects for destroyers**

This article is part of series describing current state of foreign Navies. It analyzes development prospects for destroyers.

CIVIL SHIPBUILDING

***Kostylev A. I., Sazonov K. E.* Calculation of ship resistance for hit-and-run operation**

The author hereby analyzes method of ship resistance calculation for hit-and-run operation. This article contains ship resistance calculation algorithm, diagram and simulation of ship's hit-and-run operation against two types of hummocks. The author concludes, that in first approximation this method can be used for hit-and-run operations.

***Chulkov A. M., Semenov A. A.* Efficiency criterion of design solutions for fish processing trawlers**

This article reviews efficiency criterion of design solutions for fish processing trawlers. These criterion include: deadweight efficiency, Fr number, L/B, B/T, H/L ratios. Three groups of vessels are analyzed: large refrigerator trawlers of 2400, 1600 t deadweight and medium refrigerator trawler of 800 t deadweight. Economic criterion is hereby equal to fishing performance i.e. maximum fare per day. Calculation method for the same is provided.

***Bashirov R. D., Kerimli R. A.* System analysis and optimization criterion for superstructure of multipurpose crane vessel**

This article highlights optimization criterion for superstructure of advanced multipurpose crane vessel designed to service offshore platforms and shipboard equipment.

SHIP POWER SYSTEMS

***Shatrovsky D. A.* Advanced high-power plants for sea-going vessels**

Existing high-power plants at sea-going vessels have almost exhausted their efficiency improving capabilities. However, advanced high-power plants run on natural gas, thus providing efficiency above 50%. Such plants can firstly be used by LNG-carriers. It is also feasible to use them at high-power sea ice-breakers. Therefore, design works in this area must start as soon as possible.

SHIPBOARD EQUIPMENT

***Grinyova A. O., Teplyakov M. V., Khazieva M. D.* Practical experience and issues of wireless power transfer**

The authors hereby describe known methods for wireless power transfer above surface and under water. Provided are results of practical research of designed and manufactured prototype capable to transfer several kW's under water between two objects. Proposed is structure of loss reducing core in case axes shift due to object mispositioning.

***Volkova N. V., Golovanov V. I., Nikishov S. Yu., Kulichkova E. A.* Experimental survey: swapping methods and their influence on air damper hardness**

This article indicates results of experimental surveys regarding swapping methods and their influence on air damper hardness.

***Medvedev V. V., Lakiza M. V.* Intensification of heat exchange and improvement of reliability of shipboard heat exchangers**

Given are results of experimental intensification of convective heat exchanging in pipe installed at pilot plant made by «N-Prom Buro» company with assistance of HTRI and «Neva-Teplotekhnika» company. This article indicates calculation results for heat exchanging of shipboard oil coolers in XchangerSuite v. 7.1 software developed by HTRI company.

SHIPBUILDING ORGANIZATION AND TECHNOLOGY

***Eryomin A. M., Nikitin V. A., Golnev V. A.* Welding machines for butt welding of heavy-wall hull structures**

This article analyzes automation issues of groove butt welding in shielding gas environment with forced forming of welding seam on heavy-walls, particularly submarine's pressure hulls. The authors highlight design of vertical welding machines «Ritm-2C» and «Vympel» which have been successfully operated on site for more than 30 years together with their advanced versions: «Vertical-C» and «Vertical-N». Described are automation issues for welding bath stabilization and possible solutions, such as implementation of control system on fuzzy logic basis.

ECONOMY AND FINANCES

***Kravchishin V. N., Kabanov D. B., Shevyakhov V. I.* Labor setting as part of production management**

This article evaluates industry labor setting system to form principles, approaches and justification of correlation dependence from retrofitting, modernization and jobs creation. The authors analyze technical justification of labor standards, their intensity and stimulation to increase production performance.

SHIPREPAIR AND UTILIZATION

***Sutyryn V. I.* Logistic aspects of automated engineering analysis in maintenance and repair system for hull structures**

This article reviews issues in application of automated information systems of structure strength analysis for maintenance and repair of ship hulls. The authors set proposals on organization of systems for automated engineering analysis of damaged hull structures and their implementation into knowledge management systems. These

systems can be used for emergency rescuing of ships in distress or for emergency cases analysis.

Osmanov V. O., Drobotov G. G., Amirov A. G., Osmanov M. I. Diagnostics of technical facilities of transport vessels of CJSC «AKMP»

The author hereby describes new in-place diagnostics method used to define technical state of transport fleet and therefore to reduce expenses and labor costs for maintenance and repair or diagnostics.

INFORMATION SECTION

Savinovsky V. G. Hovercraft «Sormovich». Khaustov A. N. NeVa 2015: 25 years of success! TSNII SET – 50 years of shipboard electrical engineering development. Foreign information. Corvette named after the hero. New books

HISTORY OF SHIPBUILDING AND FLEET

Yoltukhovsky V. M. USSR Navy trawlers before and during the war

This article narrates about construction of trawlers, overhauling of civil ships into trawler and their successful operations during the Great Patriotic War.

Kuznetsov L. A. River monitors of «Levachev» type

The history of the river monitors in 40th years of the last century.
